SUMMARY

Industrial Computer Engineering student at ENET'Com focused on production AI deployment. Experienced across the lifecycle of AI systems, from data processing and model training to containerized serving and CI/CD automation. Solid foundation in system design and backend architecture, with hands-on experience delivering AI features inside real production platforms. Seeking an internship in AI engineering, applied machine learning, or MLOps.

EDUCATION

- **National School of Electronics and Telecommunications of Sfax(ENET'Com)** 2025 – Present
Industrial Computer Engineering Sfax, Tunisia
- **Faculty of Sciences of Monastir** 2023 – 2025
Preparatory Cycle in Physics and Chemistry Monastir, Tunisia

EXPERIENCE

- **Tunipage — NA Consulting** July 2026 – Present
AI & DevOps Intern Monastir, Tunisia
 - Redesigned the **backend architecture**, API layer and data flow to fix a broken **OpenAI API** integration and make the **Django** AI feature **scalable** and **reliable** in production, eliminating server crashes under load.
 - Owned deployment end to end: **Docker** images, **Kubernetes** orchestration, and **GitLab CI/CD** pipelines.
- **Enova Robotics** June – July 2026
Deep Learning & Computer Vision Intern Sousse, Tunisia
 - Built a custom **deep learning** dataset from self-captured photos to train a **YOLOv8** model for real-time person detection, feeding detections into **Depth Anything V2** for distance estimation.
 - Identified the target person through facial recognition with **DeepFace** (FaceNet), fusing computer vision and deep learning into one real-time perception pipeline.

TECHNICAL STACK

- **Languages:** Python, C, Java, JavaScript, MATLAB
- **AI & Machine Learning:** PyTorch, TensorFlow, Scikit-learn, Deep Learning, Computer Vision, NLP
- **LLM & Agentic Systems:** LangChain, RAG, Ollama, N8N, VLLM
- **Backend & MLOps:** Django, Docker, Kubernetes, GitLab CI/CD, Git, Linux, Apache Kafka
- **Data & Tools:** NumPy, Pandas, Matplotlib, Jupyter, Feature Engineering

PROJECTS

- **EventPlanner – Agentic AI Chatbot** (2nd Place – N8N Hackathon) 2026
Tools: N8N, LLMs, Agentic Workflows [\[🔗\]](#)
 - Built an agentic event-planning chatbot automating end-to-end event creation via multi-step LLM orchestration in N8N, handling intent, slot filling, and real-time API retrieval.
 - Awarded **2nd place** in a competitive hackathon focused on AI workflow automation.
- **ML-Powered Demand Forecasting – Bicycle Rental Platform** 2025
Tools: Python, XGBoost, FastAPI, Real-World Dataset [\[🔗\]](#)
 - Trained an XGBoost regression model on real-world data to forecast rental demand, applying feature engineering and cross-validation to optimize generalization.
- **CubeSat Thermal Prediction – LSTM Time-Series Forecasting** 2025
Tools: Python, LSTM, Operational Research, Synthetic Dataset [\[🔗\]](#)
 - Trained an LSTM to forecast solar-facing panel orientations for thermal risk management using synthetic orbital datasets simulating real-world attitude changes.
 - Applied operational research algorithms for orientation classification, improving prediction reliability and automated decision-making.

CERTIFICATIONS

- **Deep Learning – NVIDIA DLI** 2026

VOLUNTEERING

- **Webmaster** Jan 2026 – Present
IEEE ENET'Com WIE Student Affinity Group
 - Managed the group's online presence, publication schedules, and digital communication for workshops and events.
