Location:Monastir, Tunisia

## SUMMARY

Industrial Computer Engineering student at ENET'Com with a strong focus on Artificial Intelligence, machine learning pipelines, and intelligent automation. Experienced in building end-to-end AI systems — from data processing and model training to deployment. Seeking a summer internship to contribute to AI-driven research or production projects.

## EDUCATION

- **National Engineering School of Sfax (ENET'Com)** 2025 – Present  
Industrial Computer Engineering Sfax, Tunisia
- **Faculty of Sciences of Monastir** 2023 – 2025  
Preparatory Cycle in Physics and Chemistry Monastir, Tunisia

## TECHNICAL STACK

- **Languages & Frameworks:** Python, C, C++, Java, Dart, FastAPI, React.js, N8N, LangChain, LlamaIndex
- **AI & ML:** PyTorch, TensorFlow, Scikit-learn, Hugging Face Transformers, Deep Learning, Computer Vision, NLP
- **LLM & Agentic Systems:** RAG, Ollama, LLM Orchestration
- **Data & Analytics:** NumPy, Pandas, Matplotlib, Jupyter, Feature Engineering, Synthetic Dataset Generation

## PROJECTS

- **EventPlanner – Agentic AI Chatbot** (2nd Place – N8N Hackathon) 2026  
Tools: N8N, LLMs, Agentic Workflows, REST APIs [\[GitHub\]](#)
  - Built an agentic event-planning chatbot that automates end-to-end event creation through interactive conversation.
  - Designed multi-step LLM orchestration pipelines using N8N to handle user intent, slot filling, and real-time data retrieval.
  - Integrated external APIs to monitor event-related information and trigger automated actions based on user requests.
  - Awarded **2nd place** in a competitive hackathon focused on AI workflow automation.
- **CubeSat Thermal Prediction – Space Simulation** 2025  
Tools: Python, LSTM, Operational Research, Synthetic Dataset [\[GitHub\]](#)
  - Designed and trained an LSTM-based deep learning model to predict solar-facing orientations of CubeSat panels for thermal risk assessment.
  - Generated synthetic orbital datasets simulating real-world temperature variations and dynamic attitude changes.
  - Applied operational research algorithms for face-orientation classification, improving mission planning reliability.
- **ML-Powered Demand Forecasting – Bicycle Rental Platform** 2025  
Tools: Python, XGBoost, FastAPI, Real-World Dataset [\[GitHub\]](#)
  - Trained an XGBoost regression model on real-world data to forecast bicycle rental demand with high accuracy.
  - Built a REST API backend to serve real-time predictions and integrated an interactive web dashboard for visualization.
  - Applied feature engineering and cross-validation techniques to optimize model generalization.

## CERTIFICATIONS

- **Deep Learning – NVIDIA DLI** 2026

## VOLUNTEERING

- **Webmaster** Jan 2026 – Present  
IEEE ENET'Com WIE Student Affinity Group
  - Designed visual content (posters, banners) using Photoshop and Premiere Pro.
  - Coordinated event logistics and team communication for workshops.
  - Managed online presence and publication schedules across platforms.
